

How to create a premix?

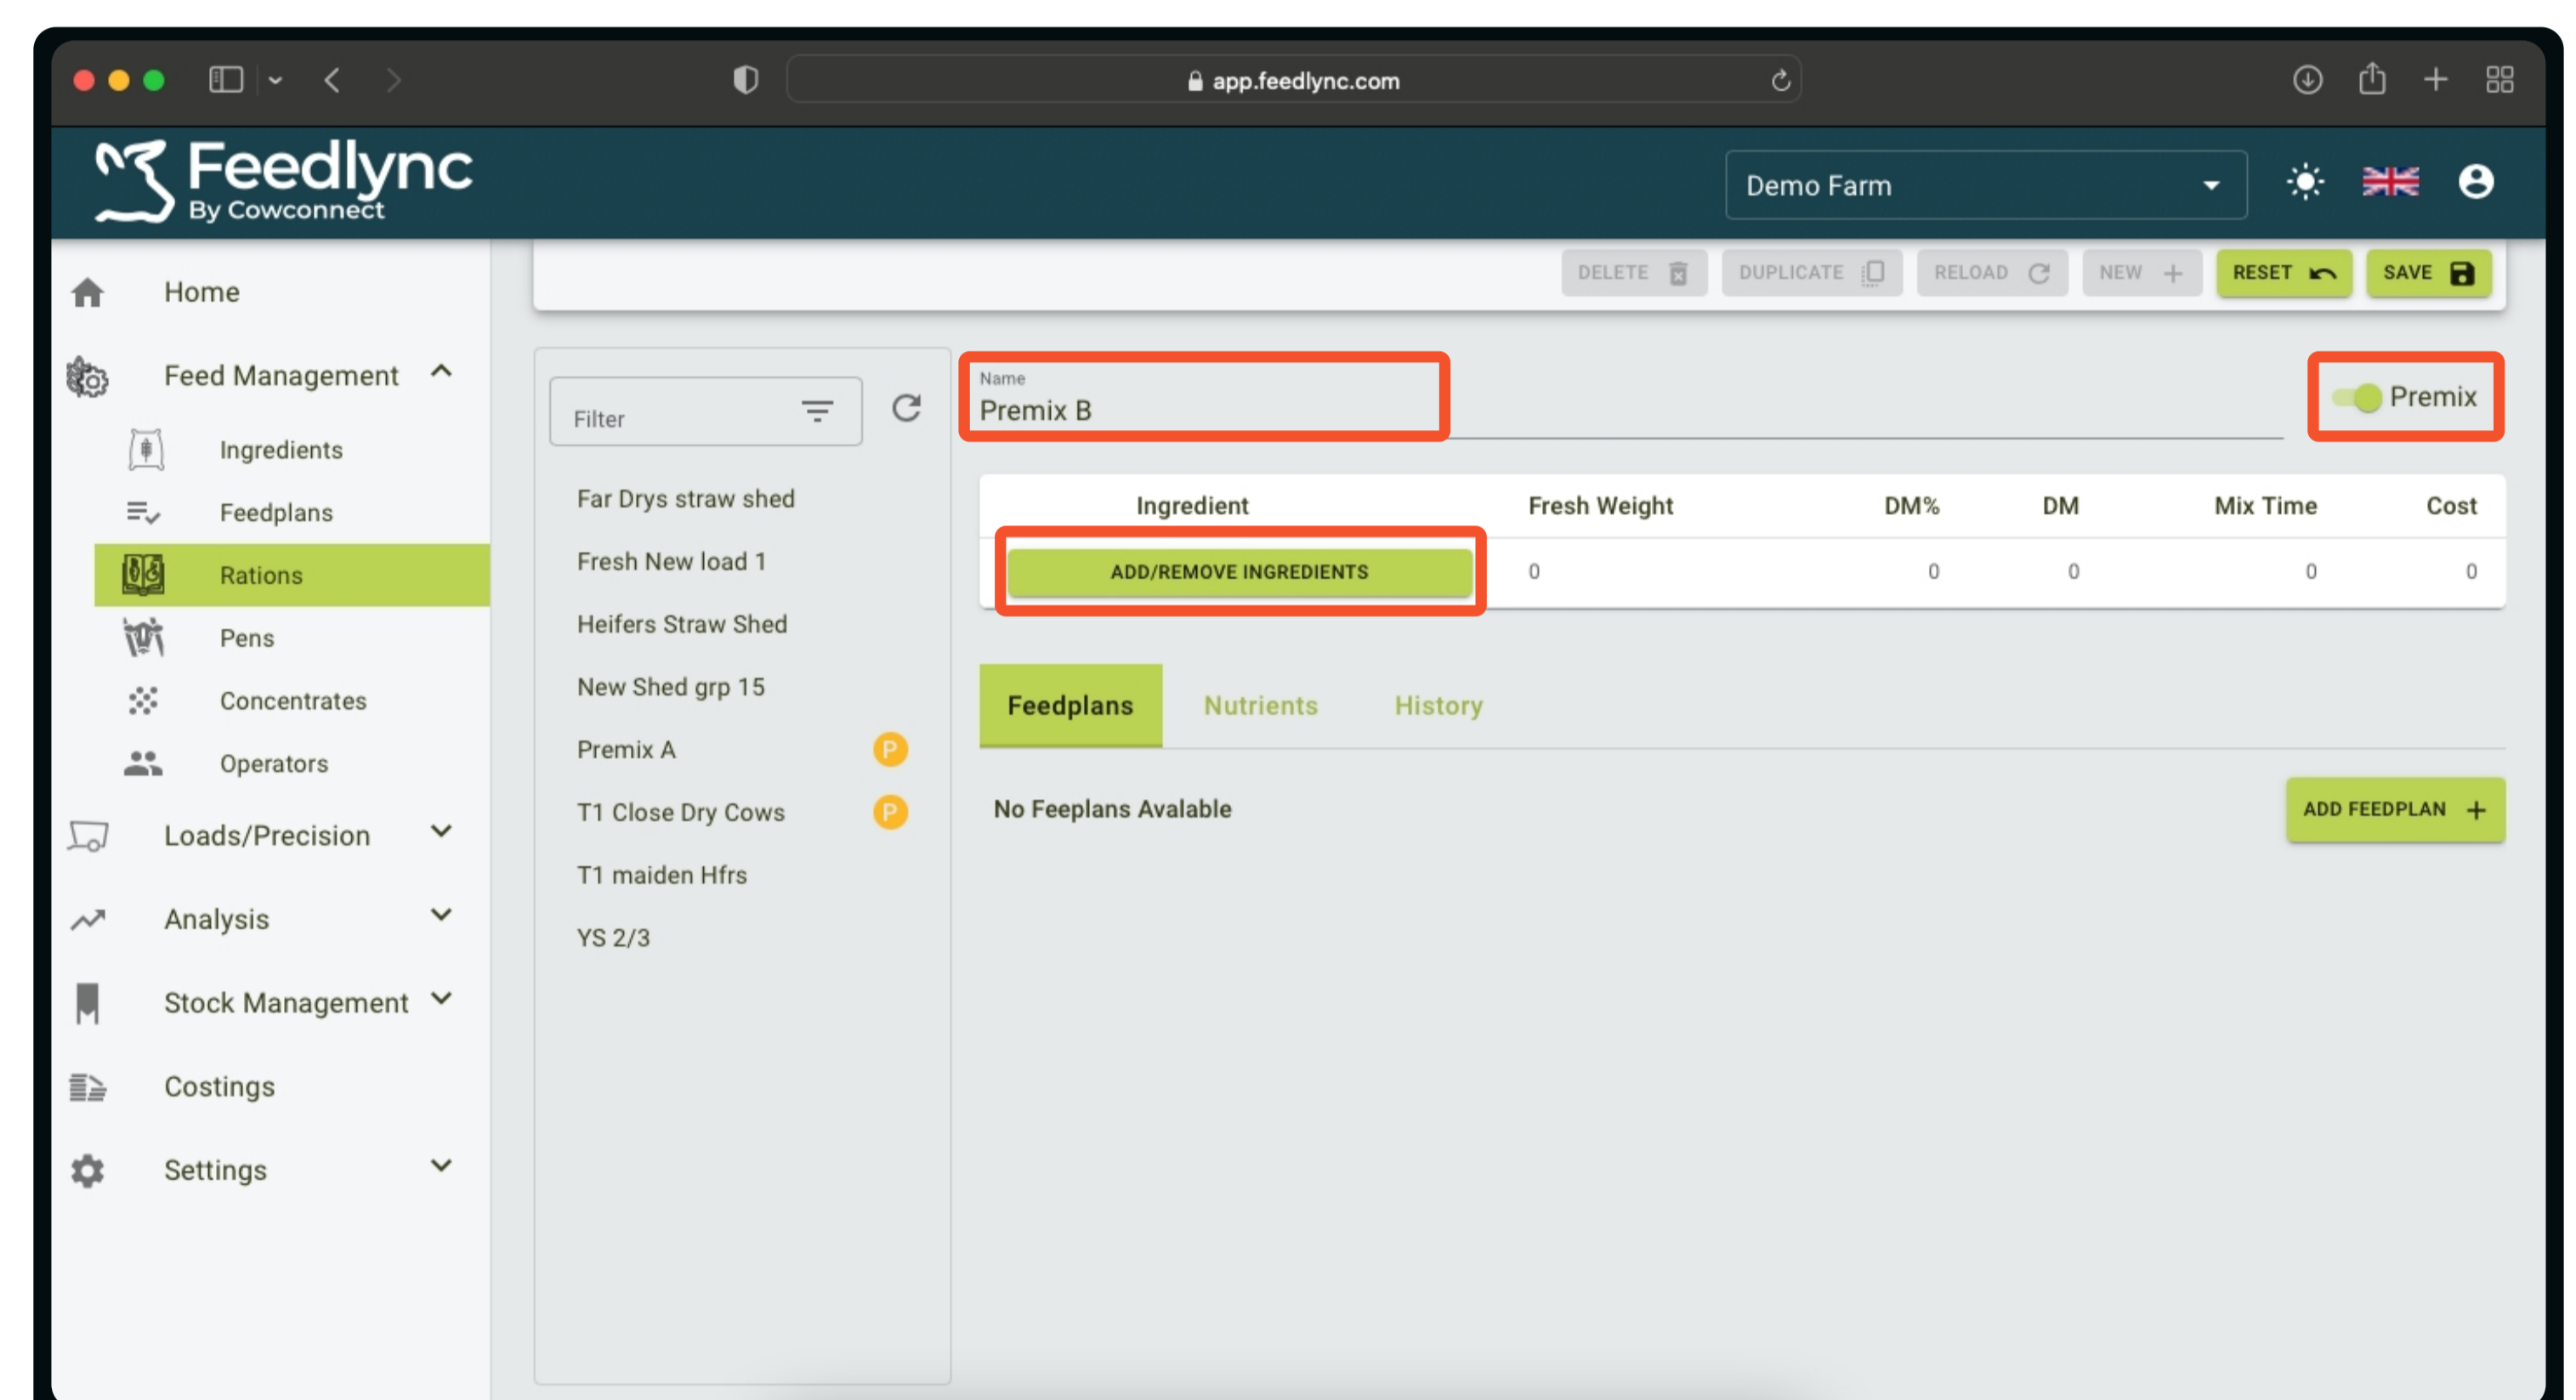

1. Log in on a desktop device with your credentials to app.feedlync.com.

In the side navigation click Feed Management, and choose Rations.

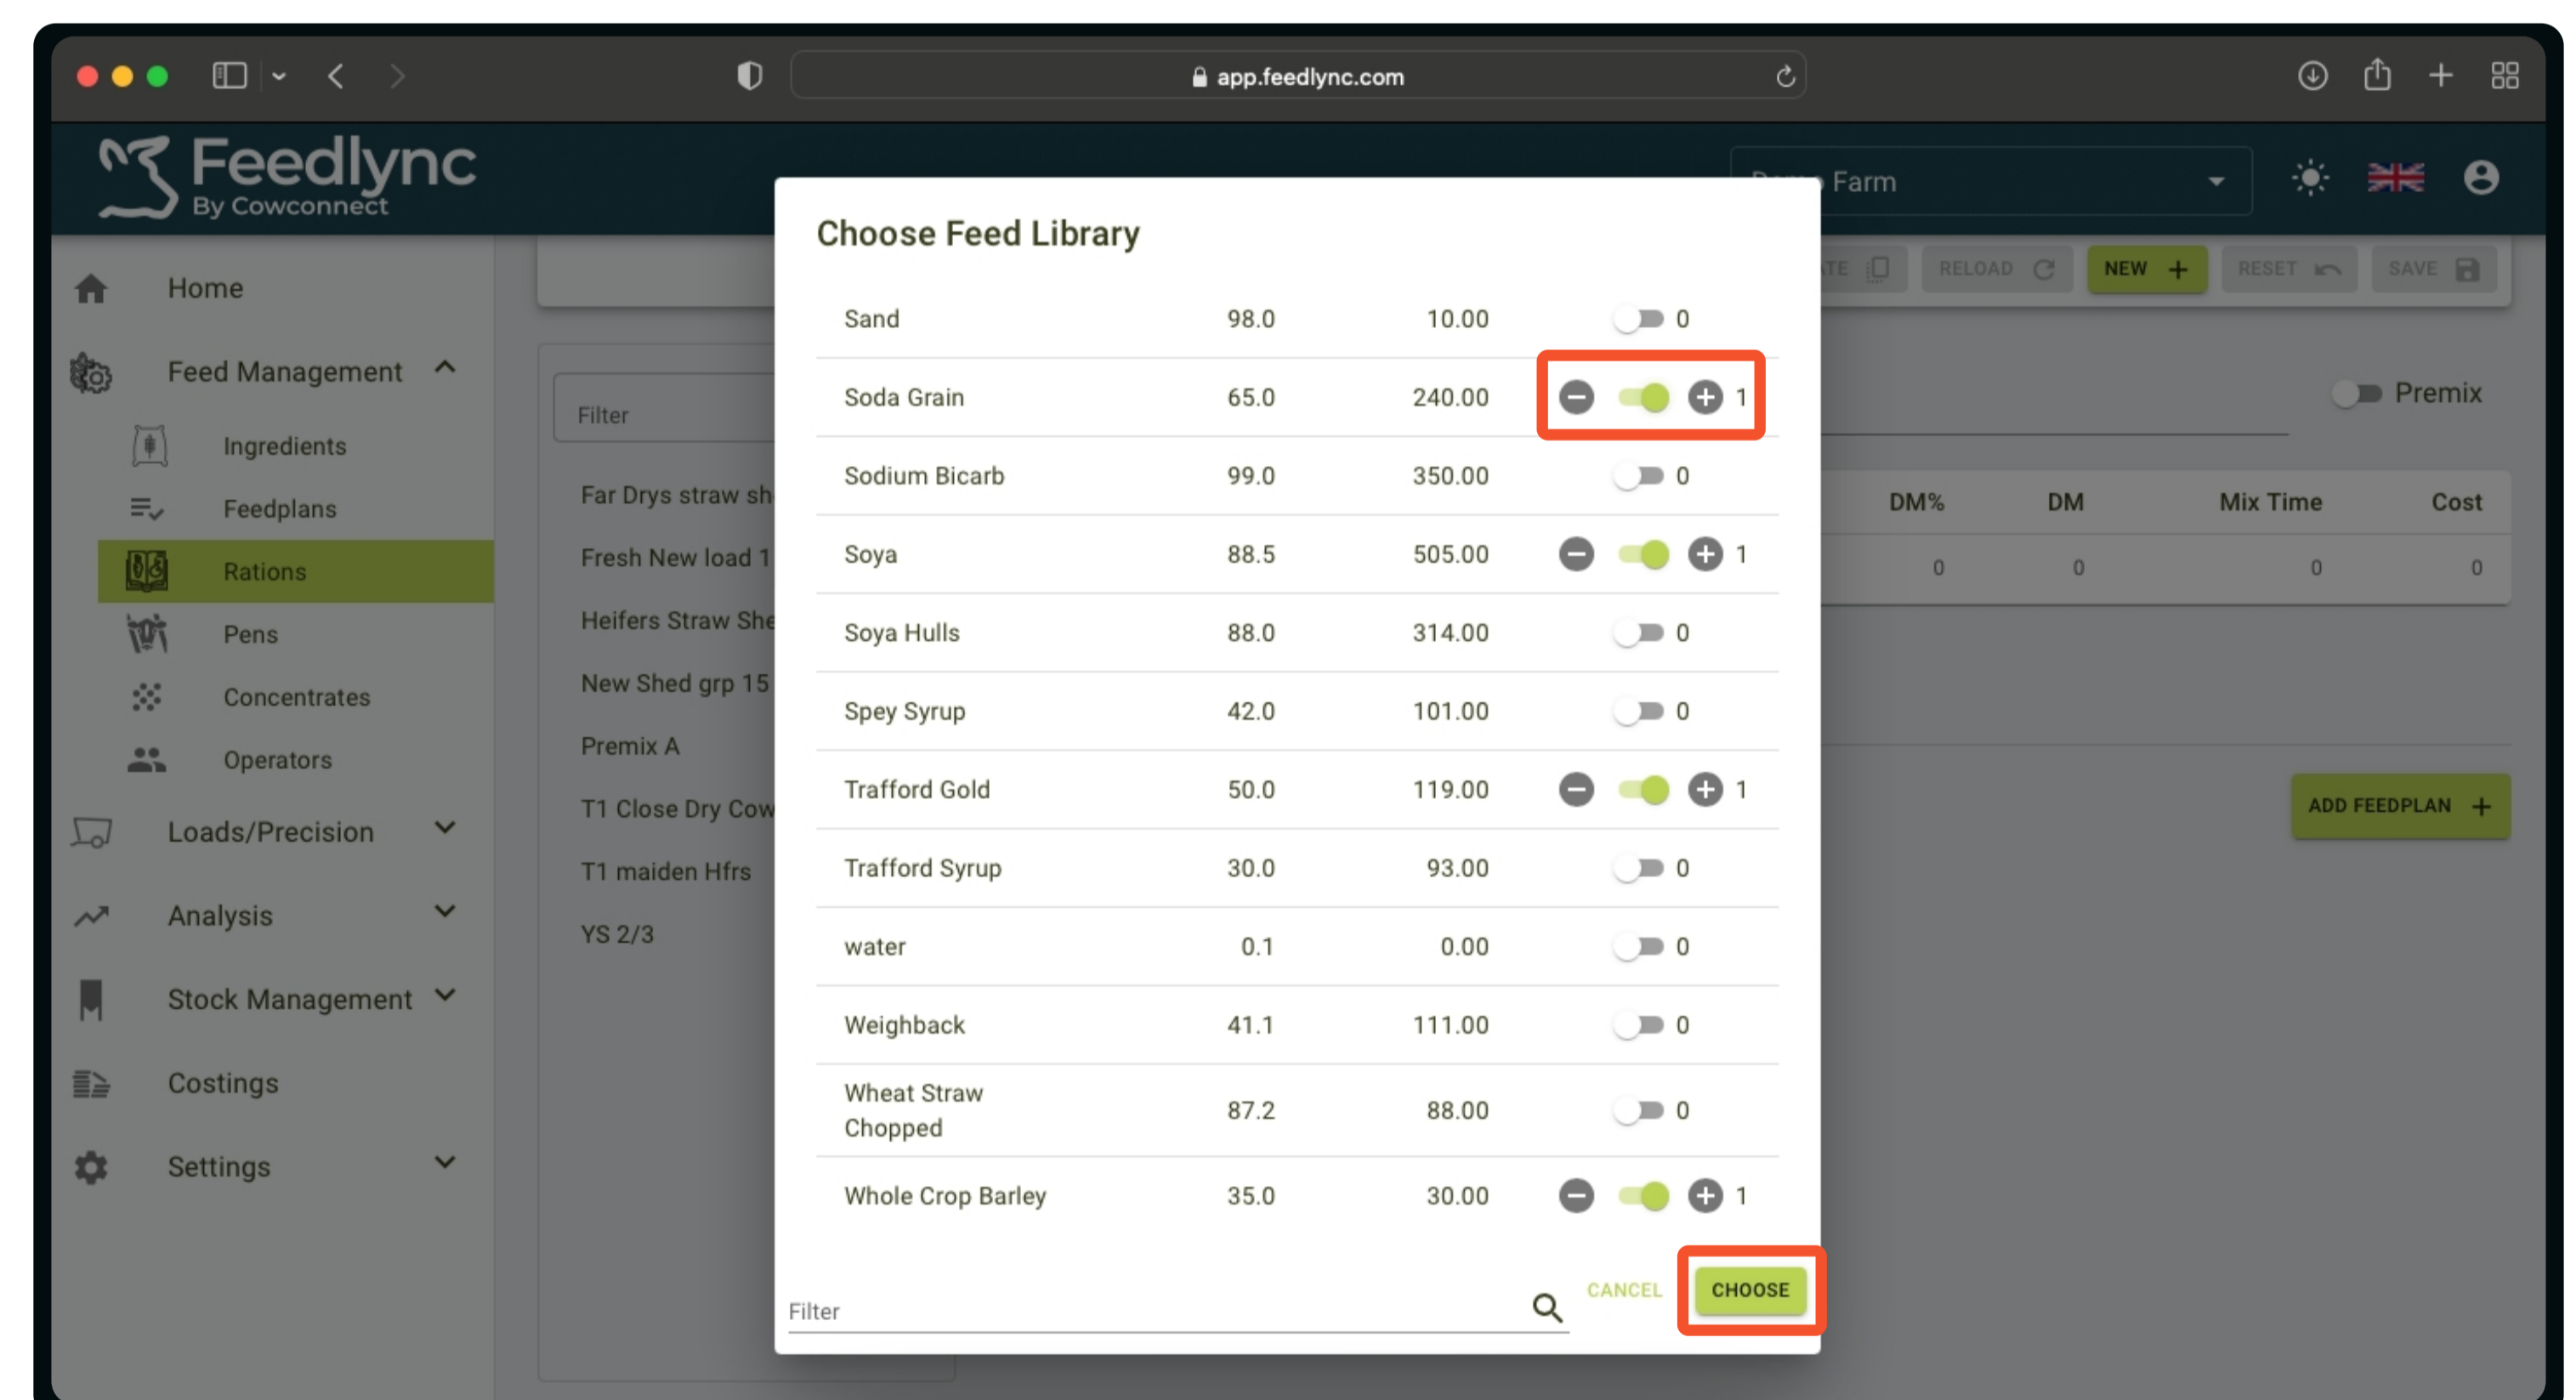

To create a new premix, in the top navigation select New +.

2. Name the premix and switch on the Premix toggle. Add the necessary ingredients.

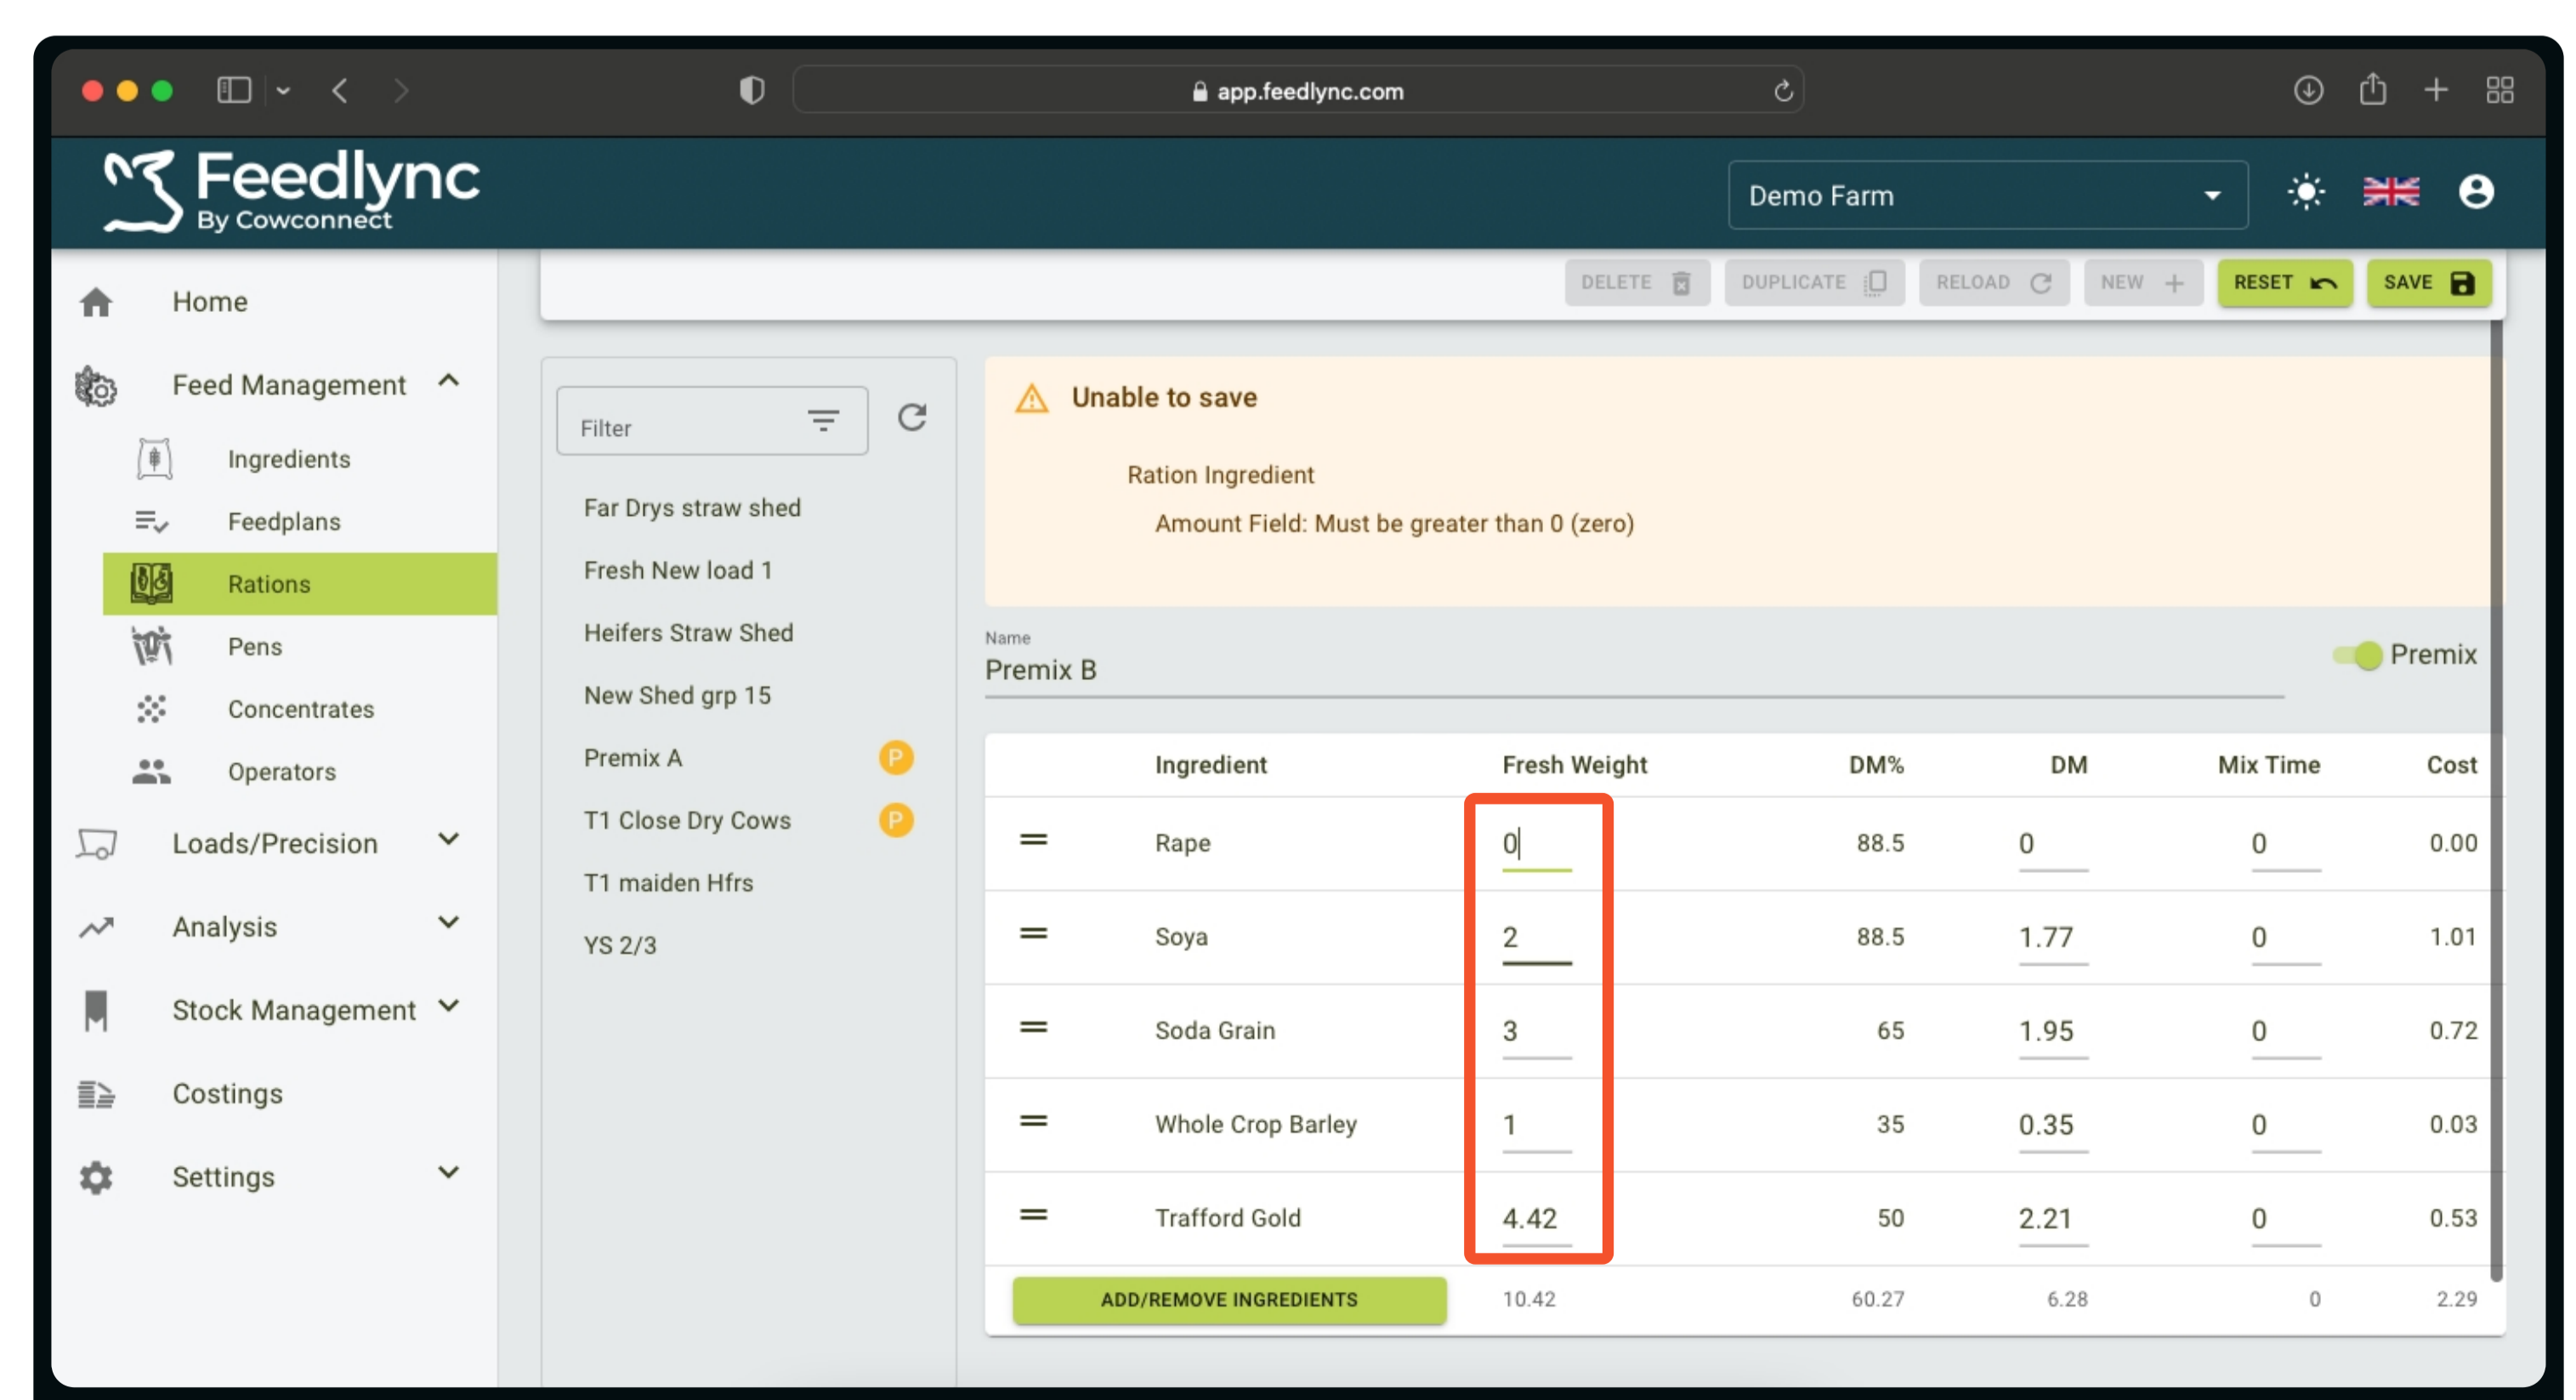

3. Select the relevant ingredients from the list, by turning on the slider. To finalise the list, click "Choose".

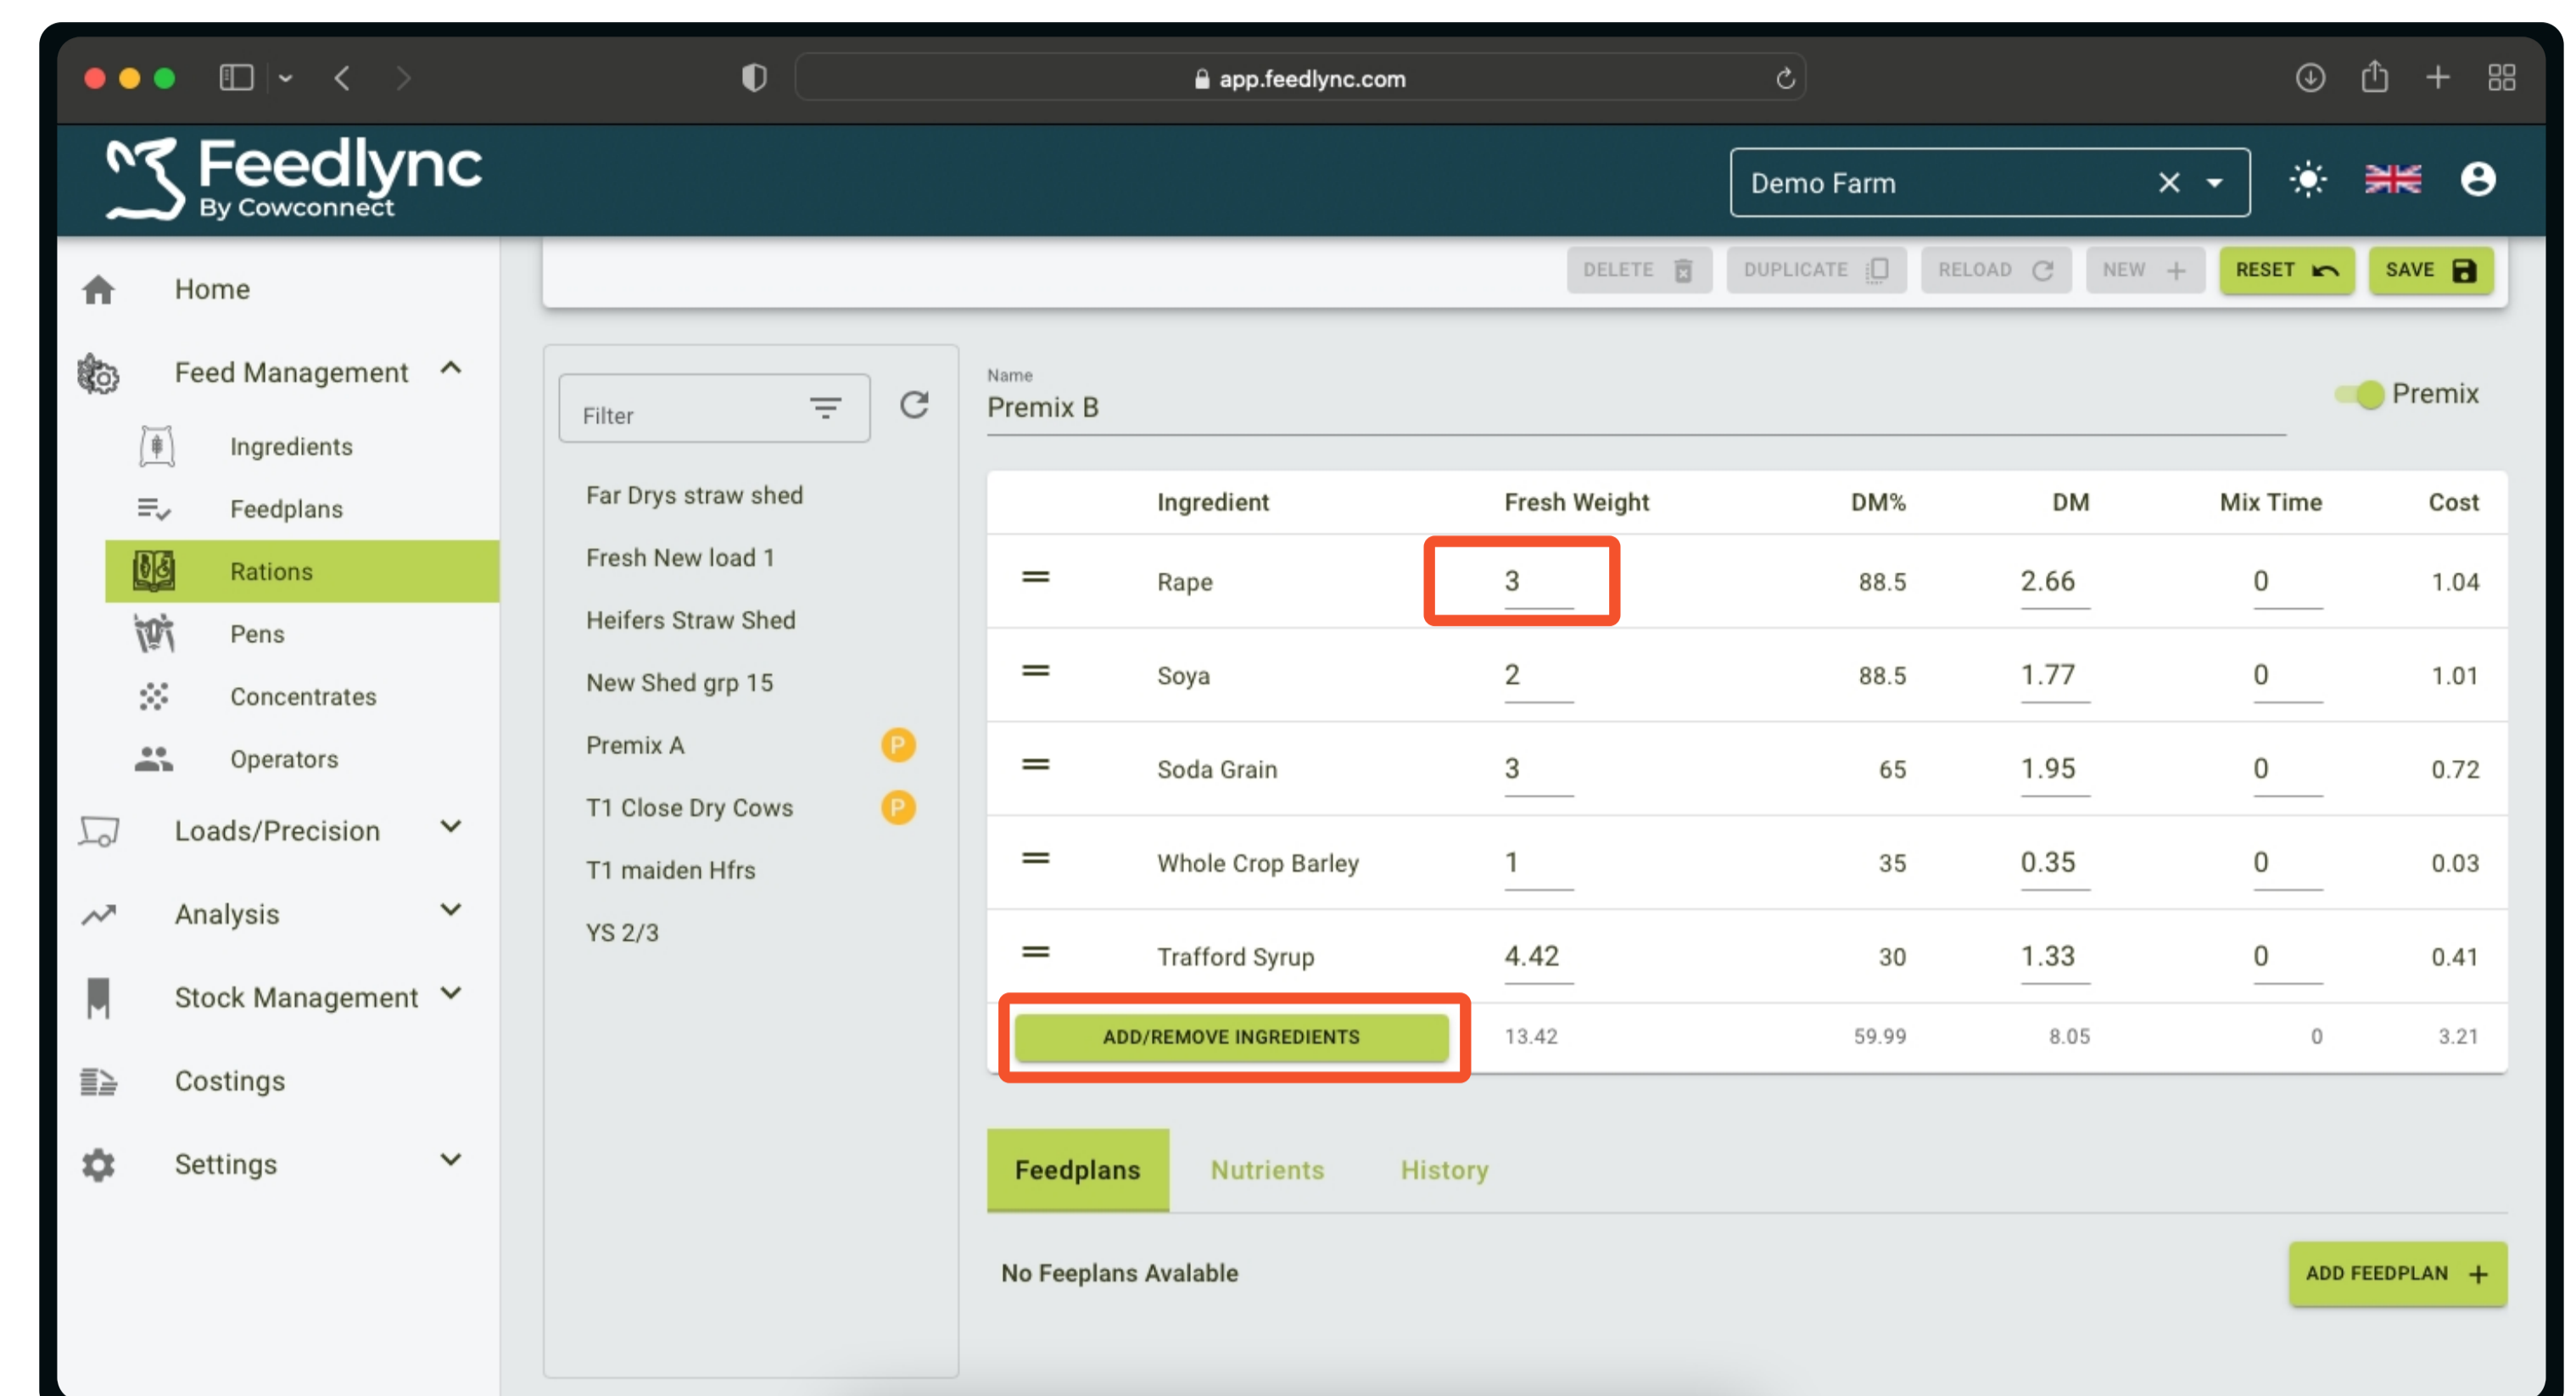

4. Add Fresh weight for each ingredient. The amount refers in kilograms or pounds per animal, depending on your farm settings.

All ingredients must have a higher value, than 0. If you don't want to include the ingredient in the Premix, please remove it from the list.

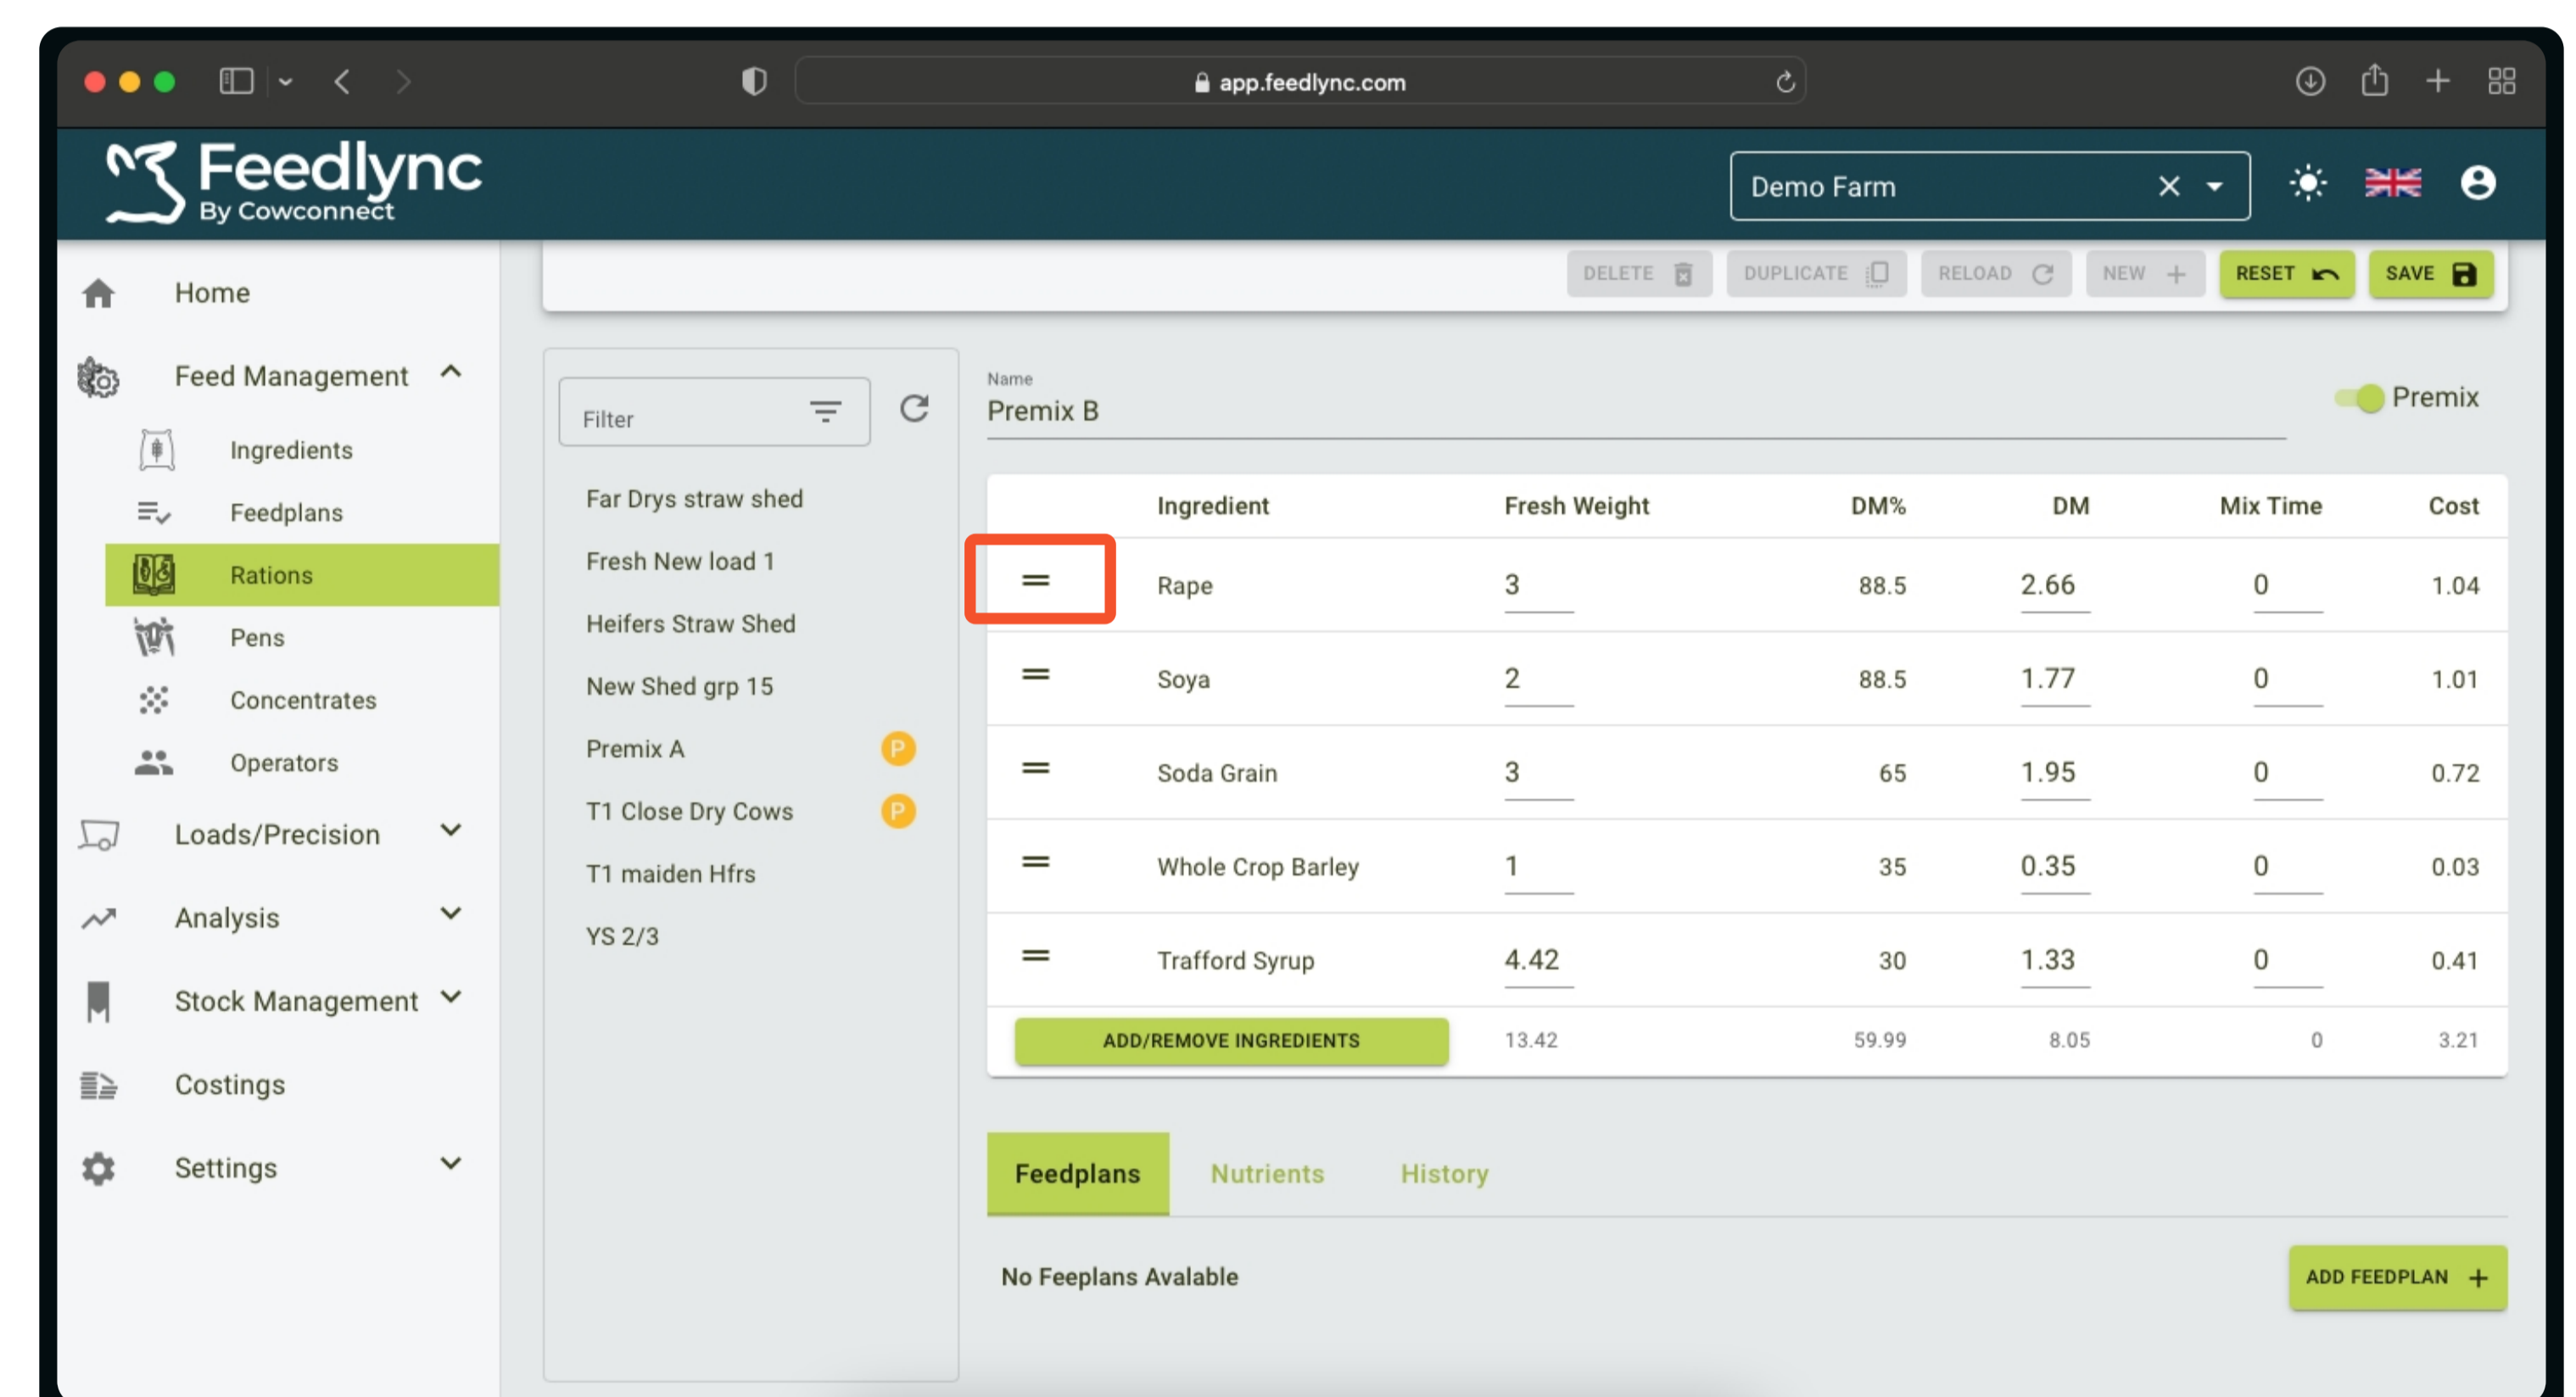

How to create a premix?

5. To adjust the amount, please click the field next to the ingredient, and type in the correct value.
To remove an ingredient, select Add/Remove Ingredient, and switch off the slider on the list. Press choose to save the changes. (See Step 3.)

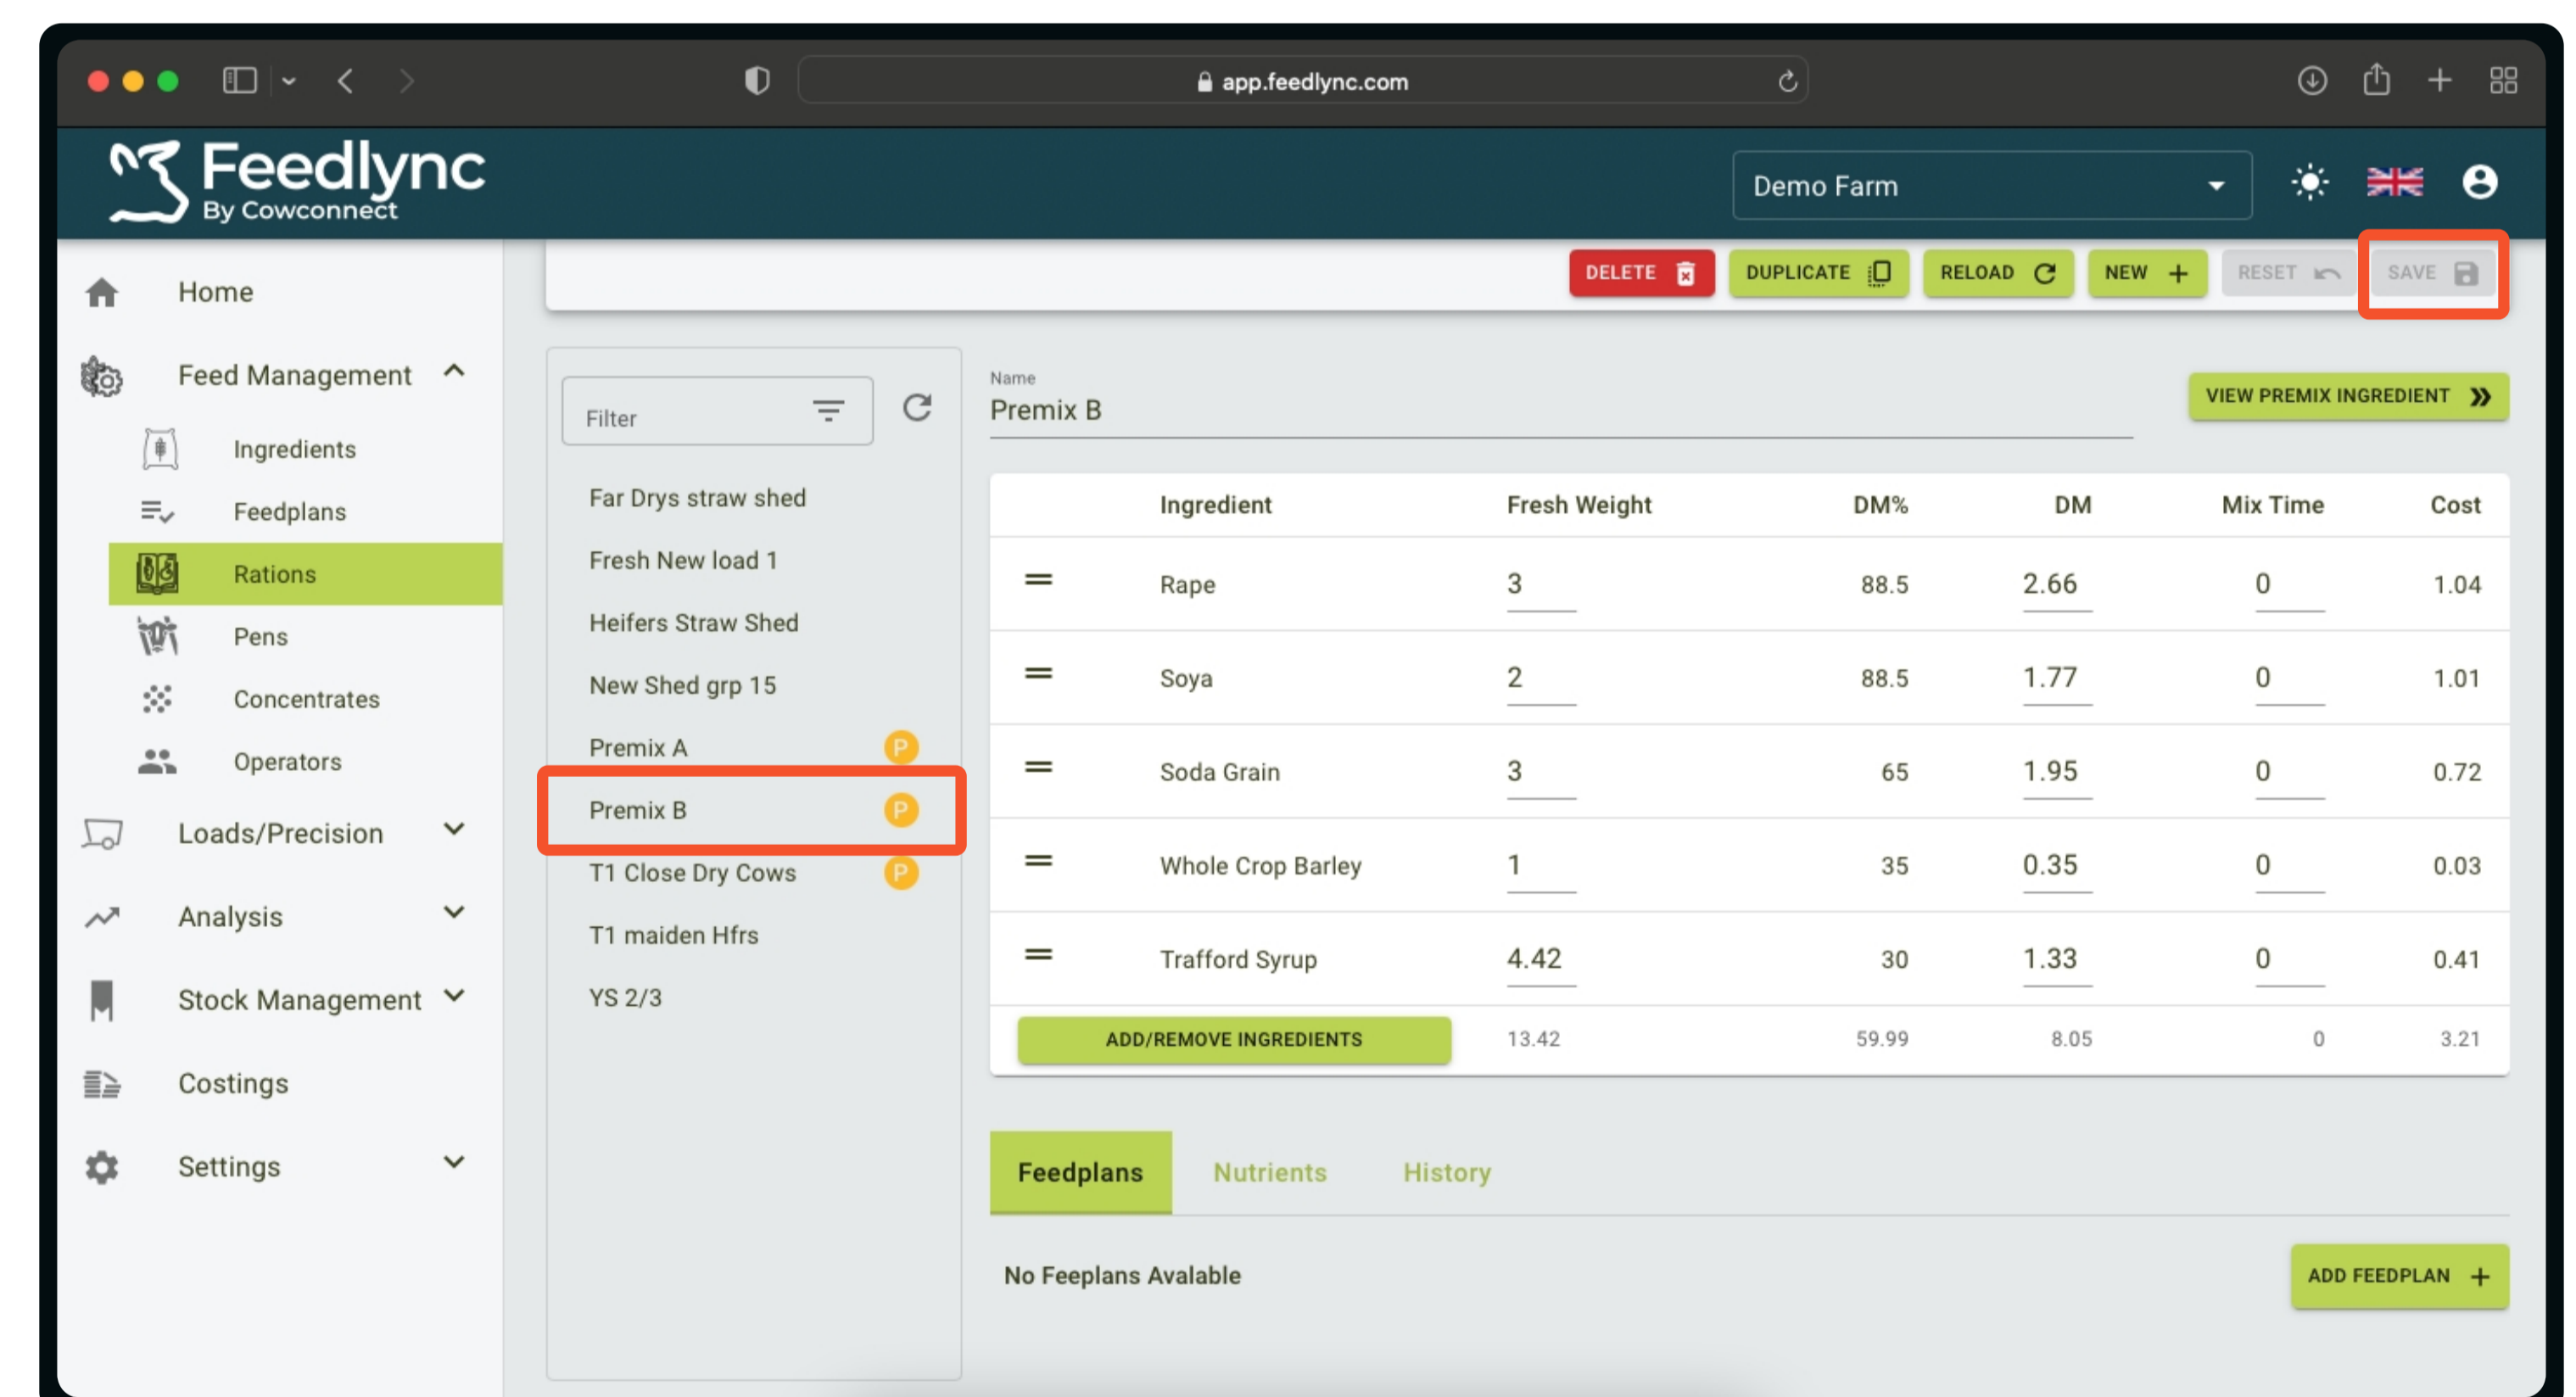

6. Change the order of ingredients on the list by holding onto the two lines and dragging the item up or down the list.

We recommend creating an order on the list, which follows how the ingredients will be loaded into the mixer.

7. Once the premix is saved, a yellow circle and a P will indicate which ration is a premix.
